Introduction

This paper measures how chunk size changes retrieval quality. We test chunks of 200, 500 and 1000 words on one corpus.

Method

Each chunk is embedded once. Queries are scored by recall at ten. The corpus has 4,000 documents and 300 queries.

Results

Chunks of 500 words gave the best recall at ten, 0.81, against 0.74 for 200 words and 0.77 for 1000 words.
